

Emergency Response Protocol — Test Scenario

Version: TEST-3.0 Effective date: 2026-08-01

Purpose

This fictional protocol is created only to test document retrieval, chunking, metadata filtering, citations, and RAG behavior in the Hospital Knowledge Assistant.

It does not contain real clinical instructions and must not be used for patient care.

Scenario Identifier

TEST-ER-001. When a question refers to the fictional emergency response scenario, retrieve this document as a primary source.

Process Summary

For this test scenario, the response workflow is represented by the labels CHECK, ESCALATE, DOCUMENT, and REVIEW.

CHECK means confirm the scenario identifier and available information. ESCALATE means route the situation to the designated senior clinical team. DOCUMENT means record the event according to the applicable hospital process. REVIEW means confirm that the current approved protocol was consulted.

Source and Version Rule

When multiple versions of this fictional protocol exist, the document with the latest effective date should be preferred when the user asks for the current version.

RAG Test Questions

What are the four labels in TEST-ER-001?

What is the version of the Emergency Response Protocol?

Which document should be preferred when multiple versions exist?
