

Infection Control Protocol — Test Scenario

Version: TEST-2.1 **Effective date:** 2026-07-15

Purpose

Fictional educational data for testing the hospital RAG application. This document is not a real infection-control protocol.

Scenario Identifier

TEST-IC-014. Questions containing this identifier should retrieve this document.

Key Rules for the Test Scenario

Rule A: Confirm the relevant isolation category from the approved local policy before proceeding.

Rule B: If the required category cannot be established from available information, escalate to the designated infection-control contact.

Rule C: Record the policy version used for the decision.

Document Metadata

Owner: Fictional Infection Control Unit.

Review cycle: Six months for this test dataset.

Current test version: TEST-2.1.

RAG Test Questions

What is TEST-IC-014?

What should happen if the isolation category cannot be established?
